EDUCATION

Savitribai Phule Pune University (SPPU)

Bachelor of Engineering in Computer Engineering

CGPA: 8.55 / 10.0 Current Year: Final Year

Pune, Maharashtra

Expected Graduation: June 2027

SUMMARY

Computer Engineering undergraduate with hands-on experience building production backend systems in Java and Spring Boot. Solved 300+ Data Structures and Algorithms problems on LeetCode. Experienced with REST API design, authentication systems, and relational and NoSQL databases. Seeking Software Development Engineer (SDE) Intern roles to apply strong fundamentals in algorithms, system design, and backend development.

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript, SQL

Data Structures and Algorithms: Arrays, Strings, Linked Lists, Stacks, Queues, Trees, Binary Search Trees, Hashing, Recursion, Dynamic Programming

Backend and Web Development: Spring Boot, Spring Data JPA, Hibernate, REST APIs, Microservices, HTML5, CSS3

Databases: MongoDB, MySQL, PostgreSQL, Firebase Firestore, JPA/Hibernate ORM

Tools and Platforms: Git, GitHub, Postman, Firebase, Linux, JWT Authentication, OAuth2, VS Code, IntelliJ IDEA

Core Competencies: Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, System Design Fundamentals, CI/CD, Problem Solving

EXPERIENCE

Java Developer Intern

Sep 2025 – Feb 2026

Genzopia Solutions

6 months

- Developed and maintained backend features in Java within a production codebase, resolving 20+ bug tickets and shipping code reviewed and merged into the live release branch
- Implemented Firebase Authentication and Firestore integration to support real-time data synchronization for 1,000+ active users, reducing data sync latency by roughly 30% through query and listener optimizations

PROJECTS

GateKeeper – API Gateway Proxy Platform

Java, Spring Boot, JWT, REST APIs

GitHub: github.com/Jaydeep2009/GateKeeper

- Engineered a multi-user API Gateway Proxy Platform in Spring Boot enabling developers to configure and route third-party API calls through dynamically generated proxy URLs, supporting 10+ concurrent proxied services per user
- Secured every gateway request with 4 protection layers: JWT authentication, encrypted credential injection, per-user rate limiting, and request logging, so API keys are never exposed in transit or storage
- Designed the rate-limiting and logging pipeline to sustain 100+ requests/minute per user with sub-200ms proxy overhead, enabling real-time monitoring of proxied API traffic across multiple concurrent users

UniVault – Distributed Cloud Storage Aggregator

Java 17, Spring Boot, PostgreSQL, JWT (*In Progress*)

GitHub: github.com/Jaydeep2009/UniVault

- Architected a provider-agnostic storage aggregator that pools multiple free-tier cloud accounts (Google Drive, OneDrive, Cloudflare R2, Backblaze B2) into one unified file manager, structuring the backend as a package-per-feature modular monolith in Spring Boot for future microservice extraction
- Building the chunked-upload pipeline: a ChunkingService splitting files into 4MB chunks with MD5 checksum verification and a session-based upload state machine (init/chunk/complete), backed by exponential-backoff retry logic against a pluggable StorageProvider interface for per-chunk upload failures

ACHIEVEMENTS AND CERTIFICATIONS

Solved 300+ DSA problems on LeetCode (150+ active days). Certified in Backend Development (PW Skills), Java/SQL (HackerRank), and Spring Boot (CodeChef). Maintains multiple public full-stack projects on GitHub.
